How fun is making Friends!

NATIONAL PARKS

The Canary Islands are a set of islands in the Atlantic Ocean.
Many volcanic eruptions created them over millions of years.
They have a typical volcanic landscape.

This is the Anaga
massif , on Tenerife.

When magma accumulates around a volcano, a volcanic cone is created. This is the Teneguía volcano on La Palma.

A caldera is a big depression. This is the Bandama caldera on the island of Gran Canaria.

The Roque's accumulation of Lava. This is the huge Roque of Agando on La Gomera.

The malpaís landscape is made up of solidified lava flows. This is La Corona, on Lanzarote.

Fuerteventura is famous not only for the beaches but also for the sand dunes.

El Hierro is the youngest island. Five years ago a new volcano was discovered. It was a submarine volcano near the Island of El Hierro.

NATIONAL PARKS

There are four National Parks in the
Canary Islands. They are in:
Tenerife, La Gomera, La Palma and
Lanzarote.

**Nat. Park Las
Cañadas del Teide
on Tenerife**

**Nat. Park Garajonay
on La Gomera**

**Nat. Park Caldera
de Taburiente
on La Palma**

**Nat. Park Timanfaya
on Lanzarote**

These are some animals and plants

Cañadas del Teide

Red
Tajinaste

Laburnum

Broom

Violet from Teide

Blue finch

A type of lizard

Honeybee

Canary bird

Garajonay

A type of dove

Another type of dove

Blackbird

Hoopoe

Viñátigo

Barbusano

Laurel

Timanfaya

Shrew

Guirre

Raven

Owl

Tabaiba dulce

Verode

Furze

Lichen

Caldera de Taburiente

Rook

Raven

A type of frog

A type of frog

Red bejeque

A kind of holly

Barbusano

Blue
tajinaste
